

## Zhaolin Gao

---

- Contact** E-mail: zhaolin.gao@mail.utoronto.ca  
Website: <https://zhaolingao.github.io>  
Mobile: 416-821-6732
- About** I am an undergraduate student at the University of Toronto and I am going to Cornell for my Ph.D.. My research includes collaborative filtering, information retrieval, recommendation diversification, and session-based recommendation.
- Education** **University of Toronto** Sep. 2018 ~ *Present*
  - B.A.Sc., Computer Engineering
  - Overall GPA: 3.95/4.00 (92.5/100); Technical Course GPA: 4.00/4.00 (94/100)
- Research Experience** **Intern, Layer 6, TD Bank Group** May 2021 ~ Aug. 2022
  - RecSys Team, advised by Dr. Maksims Volkovs.
  - Topics: Session-based Recommendation & Collaborative Filtering
    - Proposed Mixed-Centric cost function, a novel cost for collaborative filtering (CF) which first leverages mining to select the most informative pairs, followed by a weighing process to allocate more weight to harder examples. Experiments show that the cost can be applied to different types of CF models, leading to significant gains with each type. We achieve the new state-of-the-art results by applying our cost to the graph architecture.
    - Placed 2nd in RecSys Challenge 2022. More details in the Competition section.
- Research Assistant, D3M, University of Toronto** Nov. 2021 ~ Jun. 2022
  - Data-Driven Decision Making Lab (D3M), advised by Prof. Scott Sanner.
  - Topics: Recommendation Diversification
    - Proposed TD-VAE-CF, a novel methodology that diversifies recommendations in the targeted dimension while preserving relevance across orthogonal dimensions. Experiments show that TD-VAE-CF better preserves relevance of content to user preferences across a range of diversification levels while being more efficient in comparison to Maximum Marginal Relevance.
- Research Assistant, iQua, University of Toronto** May 2019 ~ Sep. 2019
  - iQua Group, advised by Prof. Baochun Li.
  - Topics: Trust Evaluation
    - Developed Shoestring, a novel framework that incorporates similarity scoring into the paradigm of graph-based evaluation to solve the problem of few-shot evaluation. The model performs evaluation by clustering the unknown samples according to the semantic space constructed from a similarity scoring network. It achieves state-of-the-art performance for node evaluation and image evaluation in the low-data regime.
    - Developed Guardian, an end-to-end framework that constructs latent factors in social trust with graph models. Guardian is designed to incorporate social network structures and trust relationships to estimate social trust between any two users. The model can speedup trust evaluation by up to 2,827 times with comparable accuracy, as compared to the state-of-the-art in the literature.

<b>Competition</b>	2nd place (56 teams) <b>RecSys Challenge 2022</b>	Mar. 2022 ~ July 2022
	- Designed two novel tasks for session-based recommendation systems. The model is able to generate accurate user and item representations and demonstrates strong performance on the dataset provided by Dressipi.	
	1st place (10 teams) <b>2022 SAE Autodrive Challenge II</b>	Aug. 2021 ~ May 2022
	- Developed ground plane removal algorithm for 3d point cloud. The algorithm is implemented on the autonomous vehicle that is tested by completing tasks such as recognizing and obeying stop signs or arriving at a sequence of pre-determined address points.	
	3rd place (80 teams) <b>Travelling Salesman Contest</b>	Jan. 2020 ~ Apr. 2020
<b>Teaching Experience</b>	- Developed an efficient path-searching algorithm with multiple destinations by utilizing 2-opt, 3-opt, A*, and simulated annealing. The algorithm demonstrates strong performance in terms of traveling time of the generated path.	
	2nd place (55 teams) <b>MakeUofT 2019</b>	Apr. 2019
	- Built a device that can capture hand motion and execute corresponding commands based on the motion with Oculus Rift, Leap Motion, and Arduino.	
	<b>Tutor, Introductory C Course</b>	Jan. 2020 ~ Apr. 2020
	- Taught an introductory C course to a class of 15 students.	
<b>Honors and Awards</b>	<b>Tutor, Electromagnetic Field</b>	Sep. 2020 ~ Dec. 2020
	- Taught an introductory course on electric and magnetic fields to a class of 10 students.	
	<b>Dean's Honour List</b>	2019, 2020, 2021
	<b>ECE Top Student Award</b>	2019, 2020
	<b>The Wallberg Undergraduate Scholarship</b>	2019, 2020
<b>Other</b>	<b>First Year Research Fellowship</b>	2019
